

HOW TO RUN Photogram

Important!

Please note that this project was made and executed with xampp for the database connections. Please note that if you use another database driver, you will have to make changes. Download the latest versions of xampp (or similar), php, Laravel, Composer and Node so you can follow the instructions below.:

1. Go to

C:\xampp\htdocs or your similar on your operative system

Type

```
git clone https://github.com/Dnprz7/laravel-project.git
```

```
cd .\laravel-project\
```

```
composer install
```

```
npm install
```

2. Run and fill the archive with example images

```
mkdir storage\app\public\images
```

```
mkdir storage\app\public\users
```

And put there the images in the file “example_images”

3. Please change de file .env

With the code in the text file replace.env.txt. Then rename the file for “.env”

4. Run the migrations and seeders

```
php artisan migrate
```

```
php artisan db:seed
```

5. Run the servers

`php artisan serve`

In another terminal run

`npm run dev`

- 6. Now you are ready to view the project, if you have any issues do not hesitate to contact me by email - ddaprr@gmail.com.**
